Suppl Fig.1. Effect of the presence of cytokines to activate NK cells by TLRs agonists
A) Flow cytometric analysis of IFN-γ- and TNF-α-producing NK cells stimulated for 20h with R848 or Poly I:C with (with) or without (w/o) cytokines stimuli performed on a representative sample (NT= not treated cells). (B) Expression of activation markers on total NK cells after 20h stimulation with TLRs agonists and suboptimal doses of IL-2, IL-12 or both. (C) Expression of TLR7 and TLR8 protein in NK cells treated with IL-2, IL-12 or both for 20h evaluated by western blot.
