

## TIM-3 blockade enhances IL-12-dependent anti-tumor immunity by promoting CD8<sup>+</sup> T cell and XCR1<sup>+</sup> dendritic cell spatial co-localization

### Authors

Alycia Gardner, Álvaro de Mingo Pulido, Kay Hänggi, Sarah Bazargan, Alexis Onimus, Agnieszka Kasprzak, Jose Conejo-Garcia, Katarzyna A. Rejniak and Brian Ruffell

### In Brief

TIM-3 blockade promotes CXCL9 expression by XCR1<sup>+</sup> dendritic cells, leading to local recruitment of intratumoral CD8<sup>+</sup> T cells, increased exposure to IL-12, and enhanced effector function during paclitaxel chemotherapy.
