Supplemental Figure 6. (A) MEER tumor cells were grown subcutaneously in WT and CD244<sup>-/-</sup> mice. Tumors were harvested on Day 32, TILs incubated for 5 hours at 37°C with or without CD3 stimulation, and analyzed by flow cytometry. Cells were gated as described in Supplemental Figure 3. PD-1 expression increased in CD8<sup>+</sup> TILs compared to splenic CD8<sup>+</sup> T cells. Spontaneous pro-inflammatory cytokine production (TNFα and IFNγ) was increased in CD244<sup>-/-</sup> CD8<sup>+</sup> TILs compared to WT.
