

Additional File 3 Figure S3: C-reactive protein levels in three patients treated with the PSMAxCD3 bsAb CC-1 and tocilizumab.

**Figure S3: C-reactive protein levels in three patients treated with a PSMAxCD3 bsAb.**

(A)-(C) Serum levels of C-reactive protein of three patients treated with a bispecific PSMAxCD3 antibody and tocilizumab are depicted. C-reactive protein levels were measured with ELISA at the central laboratory of the University Hospital Tübingen. To allow for comparison of time courses, IL-6 values from Figure 2 were added.
