

Supplementary File 6: Figure S4. DC subset CD83 expression in STAT3i treated versus medium control BrC SLN samples

Results of our own unpublished data in a small separate cohort of 3 metastasis free BrC SLN (not part of the cohort described in this paper), comparing CD83 expression level across DC subsets in STAT3i treated samples to medium control samples. CD83 expression level is expressed as percentage of positive cells within each subset. Bars represent means
