Table of contents

Figures	
Figure S1	Correlation between T cell infiltration and SOX2 expression
Figure S2	Detection of BRAF ^{V600E} mutation specific T cells
Tables	
Table S1A	Patient Characteristics: samples used for multiplex IHC
Table S1B	Patient Characteristics: samples used for CyTOF and functional assays
Table S1C	Patient Characteristics: recurrent pilocytic astrocytomas
Table S2	Antibodies used for single cell mass cytometry
Table S3	Antibodies used for multiplex IHC staining

Supplementary Figure 1

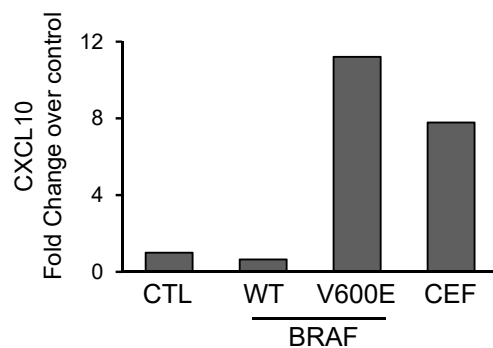

Supplementary Figure 1. Correlation between T cell infiltration and SOX2 expression.

Multiplex IHC slides were analyzed for presence of SOX2 positive tumor cells and CD3+T cells

- Bar graph shows SOX2 positive T cells in tissue from low grade glioma (n=18, PAX, GG and PA) and high grade glioma (HGG n=8, GBM +AA).
- Scatter plot showing negative correlation between abundance of SOX2 expressing tumor cells and CD3+ T cells.

Supplementary Figure 2

A

B

Supplementary Figure 2. Detection of BRAF^{V600E} mutation specific T cells.

- Peripheral blood mononuclear cells were cultured alone (CTL), with wild type (WT) or V600E mutant BRAF peptides. Pooled viral peptides from Cytomegalovirus, Epstein-Barr Virus, and Influenza Virus (CEF) were used as positive control. Figure shows BRAF^{V600E} T cells reactivity using a CXCL10 luminex assay.
- Expansion of IFN γ secreting BRAF^{V600E} specific T cells following stimulation with peptide loaded autologous dendritic cells.

Supplementary Table 1A. Patient characteristics: samples used for multiplex IHC

Tumor Type (n)	Low Grade Glioma			High Grade Glioma
	PXA (5)	GG (7)	PA (6)	HGG (7)
Age mean in years (range)	12.4 (7-17)	10.1 (3-18)	7.5 (2-16)	11.9 (0.5-17)
Gender – Male	4 (80%)	3 (43%)	3 (50%)	5 (71%)
Tumor Location				
Parietal	3 (60%)	1 (14%)	1 (17%)	
Temporal	2 (40%)	4 (57%)		5 (71%)
Thalamus		1 (14%)	1 (17%)	2 (29%)
Brain stem			1 (17%)	
Posterior fossa/Cerebellar			3 (50%)	
Not specified		1 (14%)		
BRAF status				
BRAF V600E	4 (80%)	4 (57%)	0%	1(14%)
BRAF-KIAA1549 fusion	ND	ND	2 (33%)	ND
Other genetic alterations				
				IDHwt 6 (86%) H3F3AG34R 3 (43%) H3K27M 1 (14%) TP53 4 (57%) ATRX 3 (43%) Amplification: MYCN, MDM4, PIK3C2B, EGFR (14% each) PTEN loss 1 (14%)

ND – Not determined

Supplementary Table 1B. Patient characteristics: samples used for CyTOF and functional assays

	Low Grade Glioma			High Grade Glioma
	GG (2)	PA (5)	Other (2)	Anaplastic GG (1)
Tumor Type (n)				
Age mean in years (range)	7 (6-8)	8.9 (2-14)	8.5 (2-15)	18
Gender – Male	0	2 (40%)	1(50%)	0
Tumor Location				
Parietal		2 (40%)	1(50%)	
Temporal				1 (100%)
Thalamus				
Brain stem	1 (50%)			
Posterior fossa/Cerebellar	1 (50%)	3 (60%)	1(50%)	
BRAF status				
BRAF V600E	1 (50%)			1 (100%)

Supplementary Table 1C. Patient characteristics: recurrent pilocytic astrocytomas

Pt	Location	Gross Total resection at Dx	Time to recurrence (months)
1	Thalamus	No	75
2	Parietal	Yes	26
3	Brain Stem	No	34

Supplementary Table 2. Antibodies used for single cell mass cytometry

Antibody	Clone	Supplier
CD45	HI30	Fluidigm
CD11b	ICMF44	Fluidigm
CD19	HIB19	Fluidigm
HLADR	L243	Fluidigm
