

Supplementary Figure S1. Phenotypic changes of V γ 9V δ 2 T-cells by zoledronate expansion culture. PBMCs before V γ 9V δ 2 T-cell injection and zoledronate-expanded V γ 9V δ 2 T-cells were examined by flow cytometry. V γ 9⁺CD3⁺ cells were gated and examined for their expression of CD45RA, CD27, NKG2D, CD69 and CXCR3. Patient TU-2844 data were shown as an example.
