

Supplementary Figure S6. Pharmacodynamic depletion of CD4⁺ and CD8⁺ T cells and blockade of IFNAR following antibody treatment. Tumor bearing mice were treated with either depleting anti-CD4, anti-CD8 or blocking anti-IFNAR antibodies. **A.** Frequency of CD4⁺ and CD8⁺ T cells in blood and tumors of antibody treated mice after 24 hrs. **B.** IFNAR MFI on CD4⁺ and CD8⁺ T cells and CD11b⁺ cells 24 hrs after anti-IFNAR treatment. *n* = 3 mice/group.
