**Fig. S11: Triggering with hCD137L reduces expression of inhibitory receptors on CAR T cells.**

**a-b.** Representative flow-cytometry data profiling the expression of activating/inhibitory receptors on CAR T cells upon incubation with NALM-6 tumor cells. A representative plot from at least three donor-derived CAR T cell populations is shown.

**c.** Paired comparisons of the reduction in expression of these markers. Paired t-tests were used for computing the \( p \)-values.
