

Supplementary Figure 1. Inflammatory marker values versus status of malignancy. Median inflammatory index values or distributions at Covid-19 diagnosis are displayed against the status of malignancy. Values and distributions shown for the NLR ($n=667$ active, $n=320$ remission; $P=0.50$), PLR ($n=643$ active, $n=317$ remission; $P=0.32$), OIS ($n=418$ active, $n=199$ remission; $P=0.05$), mGPS ($n=414$ active, $n=228$ remission; $P=0.05$), and PI ($n=528$ active, $n=259$ remission; $P=0.40$). $*=P<0.05$. Error bars represent 95% confidence interval from the median.
