

**Supplementary Figure 1. Inflammatory marker values versus status of malignancy.** Median inflammatory index values or distributions at Covid-19 diagnosis are displayed against the status of malignancy. Values and distributions shown for the NLR ( $n=667$  active,  $n=320$  remission;  $P=0.50$ ), PLR ( $n=643$  active,  $n=317$  remission;  $P=0.32$ ), OIS ( $n=418$  active,  $n=199$  remission;  $P=0.05$ ), mGPS ( $n=414$  active,  $n=228$  remission;  $P=0.05$ ), and PI ( $n=528$  active,  $n=259$  remission;  $P=0.40$ ).  $*$ = $P<0.05$ . Error bars represent 95% confidence interval from the median.
