

B. HLA allotype population coverage

Supplementary Figure 2:

Distribution of the 51 HLA-A, -B, -C, DR, and 30 DQ alleles within the AT/RT cohort (A). Population coverage of HLA-allotypes was calculated for the AT/RT cohort (upper panels) and the comparative benign tissue dataset (lower panels) using the IEDB database (<http://tools.iedb.org/population>) (B). The cumulative coverage is depicted as a black line, whereas the percentage of individuals with a given number of epitope hits is shown as a column.
