

1 **Supplementary Figure 1.** Treatment and PBMC sampling schedule. **A)** In the MM study, patients  
 2 received up to 10 UV1 vaccinations (300 µg) and 4 doses of ipilimumab (green arrows, 3 mg/kg). PBMCs  
 3 were sampled at 4 time points during the study period and every 6 months thereafter for up to 5 years. **B)**  
 4 In the NSCLC study, patients received up to 13 UV1 vaccinations (100 µg, 300 µg, or 700 µg) and  
 5 additional vaccinations thereafter if not considered inappropriate due to clinical deterioration. PBMCs  
 6 were sampled at 8 time points during the study period and every 6 months thereafter for up to 5 years. **C)**  
 7 In the PC study, patients received up to 13 vaccinations (100 µg, 300 µg, or 700 µg) during the study  
 8 period and additional vaccinations up to 2 years if considered clinically appropriate. Patients also received  
 9 goserelin 10.8 mg every 3 months, and bicalutamide 50 mg per day. PBMCs were sampled at 8 time  
 10 points during the study period and thereafter every 6 months for up to 8 years.

11

12 **Supplementary Figure 2.**

13 Overview of immune response evaluable patients and patients enrolling in the long-term  
 14 immunomonitoring study. IR, immune response. Figure created with Biorender.com.

15

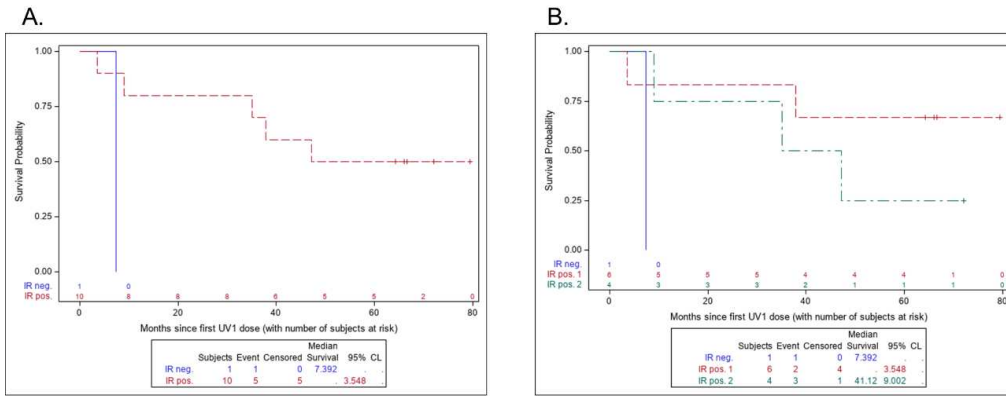

16 **Supplementary Figure 3.**

17 Kaplan-Meier plots for immune response (IR) positive vs negative patients in each study (red curves  
18 indicate IR positive population, and blue curve IR negative. **A)** Melanoma, IR positive vs. IR negative,  
19 mOS, not reached (NR) vs. 7.4 months (Log-rank p-value 0.05). **C)** NSCLC, IR positive vs. IR negative,  
20 mOS, 38.4 months vs. 21.3 months (Log-rank p-value 0.67). **E)** PC, IR positive vs. IR negative, mOS,  
21 76.0 months vs. 30.0 months (Log-rank p-value 0.20).

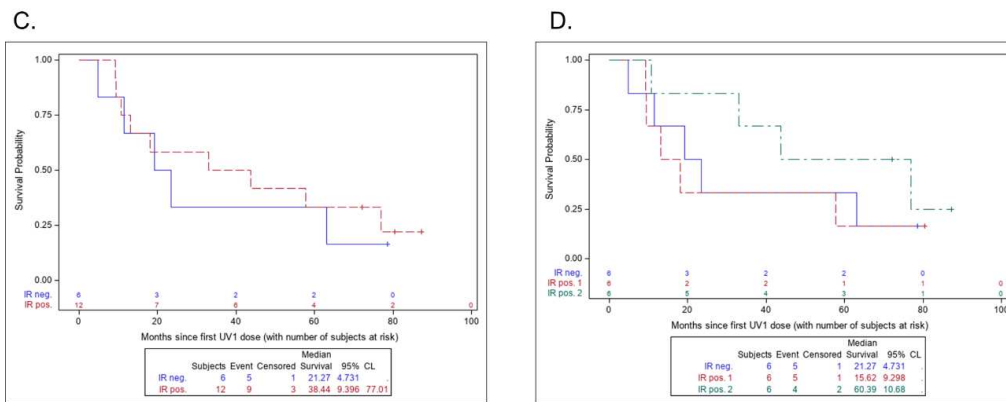

22 Kaplan-Meier plots for patients with IR against  $\geq 2$ , 1, or none of the UV1 peptides in each study (green  
23 curves indicate IR against  $\geq 2$ , red curve 1, and blue curve 0 peptides recognized). **B)** Melanoma, IR  
24 positive  $\geq 2$  vs. 1 vs no peptide, mOS, 41.1 months vs. NR vs. 7.4 months (Log-rank p-value 0.09). **D)**  
25 NSCLC, IR positive  $\geq 2$  vs. 1 vs no peptide, mOS, 60.4 months vs. 15.6 months vs. 21.3 months (log-rank  
26 p-value 0.51). **F)** PC, IR positive  $\geq 2$  vs. 1 vs no peptide, mOS, NR vs. 44.8 months vs. 30.0 months (log-  
27 rank p-value 0.12).

30

31 **Supplementary Figure 4.**

32 Detailed overview of immune responses against single peptides in five patients experiencing broadening  
 33 of immune responses during late peaks. A manuscript with detailed clinical follow-up of patients in the  
 34 PC study is being prepared.

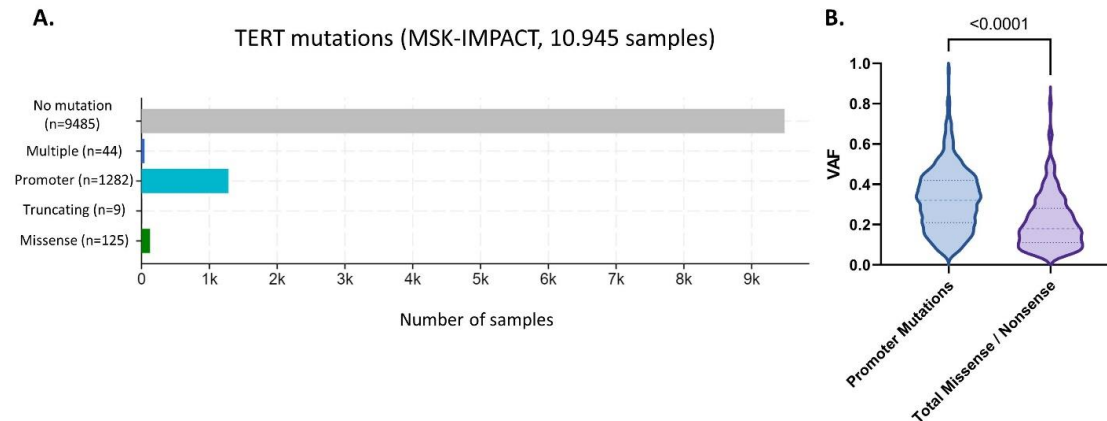

35

36

37 **Supplementary Figure 5.**

38 **A)** Distribution of somatic mutations in the hTERT gene. **B)** Variant allele frequency (VAF) of promoter  
 39 mutations vs. missense / nonsense mutations in the hTERT gene. There was a significant difference in  
 40 mean VAF between promoter (0.33, SD 0.15) and missense / nonsense (0.21, SD 0.13) mutations  
 41 (Student's t-test, p value < 0.0001. Data gathered from the MSK-IMPACT Clinical Sequencing Cohort  
 42 using cBioPortal.org.

43

44 **Supplementary Table 1.**

45 Patients and their characteristics from which vaccine-specific T cell clones (TCCs) were isolated and  
 46 evaluated for in vitro cytokine production. 17 TCCs were selected for in vitro characterization, 4 TCCs  
 47 from patient N02 in the MM study, 4 TCCs from patient 802, 3 TCCs from patient 806, and 4 TCCs from  
 48 patient 822 in the PC study, and 2 TCCs from patient 906 in the NSCLC study. HLA restriction was  
 49 performed by HLA blocking antibodies (HLA gene only) and/or EBV-LCL panels (locus including four-  
 50 field resolution). Color coded amino acid sequence for the complementarity-determining region 3 of the T  
 51 cell receptor. “-”, not done.

67

68 **Supplementary Table 5.**

69 Multiplex cytokine assay for detecting Th1 and Th2 differentiation of vaccine-specific T cell clones  
 70 (TCCs) from 5 patients in the MM, PC, and NSCLC studies. Vaccine-specific TCCs were stimulated for  
 71 24 hours with autologous APCs loaded with antigen-specific vaccine peptides. Cytokine concentrations  
 72 represents mean values (pg/mL) with background (stimulation with irrelevant peptide) subtracted.  
 73 Cytokine ratios written in blue refer to Th1 polarization (IFN $\gamma$ /IL10 > 5; TNF $\alpha$ /IL4 > 10; IFN $\gamma$ /IL4 > 20;  
 74 IFN $\gamma$ /IL5 > 5; IFN $\gamma$ /IL13 > 1), and cytokine concentrations written in red refer to Th2 polarization  
 75 (IFN $\gamma$ /IL10 < 0,2; TNF $\alpha$ /IL4 < 0,5; IFN $\gamma$ /IL4 < 1; IFN $\gamma$ /IL5 < 0,2; IFN $\gamma$ /IL13 < 0,05).

Trial	Patient	Peptide specificity	TCC #	Cytokine concentration (pg/ml)										Ratio between Th1/Th2 cytokines					Polarization
