

Supplemental Figure 5: FR-Bh T cells response and correlation with endogenous OC patient T cells and CD39 expression by CD8+ TALs at baseline: Left: Correlation between frequency of endogenous patient CD8+ TALs (A) or CD4+ TALs (B) and IFN- γ production in response to FR-Bh T cells added to OC patient co-cultures. Right: Comparison of endogenous patient CD8+ TALs (A) or CD4+ TALs (B) between FR α^{Lo} and FR α^{+} OC patient samples (n=10 OC patients). C) % CD39+ CD8+ TALs (endogenous OC patient TALs) across tested OC patients (n=10, left) with representative FACS plot (right). Correlations (A & B, Left); simple linear regression, Comparison based on patient FR α status (A & B, right); Unpaired t test (two-tailed).
