

**A****B**

Figure S9. **A.** Example images of representative infiltrated, excluded and desert tumor-immune phenotypes, were shown to illustrate distinct CD8+ T cell distribution in denoted stroma versus tumor areas. (a. CD8+ T cell infiltrating within the solid tumor; b. CD8+ T cells infiltrating within the tumor stroma); **B.** The proportion of three immune phenotype (infiltrated, excluded, and desert) in EGFR-positive, ALK-positive, and EGFR/ALK-negative.
