

Supplemental Figure 2. Assessment of cytokine secretion by CAR-macrophages
(A) IL-6 secretion (B) TNFα secretion from the seeded CD34⁺ cell-derived macrophages without the addition of target cells. Cytokine secretion of (C) IL-6 secretion, and (D) TNFα from the seeded eGFP or CAR-iMacs with or without (ctr) LPS stimulation for 24h. (n=3-4, mean). All data are represented as the mean ± SD.
